If you need to take a photo of a license plate number, it is time to get out the camera because you can use one of many apps to do just that. In fact, you can use two apps called: PCtoScan and Blueplate. This software is available for free download and works with many operating systems, including, but not limited to, Android, Firefox, IOS, OpenSUSE and Windows 7. PCtoScan and Blueplate are two useful programs that can help you out in case you need to scan or take a picture of a license plate number. Both programs are the same in their basic user interface and functionality. You can choose a picture that you want to scan or a file that has been scanned. Once the applications have scanned the image, they save the image and a file that contains the name, location and date of the scanning process. While the PCtoScan and Blueplate apps work with your smartphone, they are not as reliable in scanning or taking a picture of a license plate number as the original scanning software and program, Shotwell, from the Linux Mint distribution. However, they have the advantage of being free. The only drawback to the 09e8f5149f
